

## DOG BONE & STANDARD ROLLERS

Powerhowse Electric have been manufacturing cable hauling equipment for nearly 50 years, our single rollers, available for sale and hire, are ideal for hauling cable through a trench or a distance above the ground before ducting. The Roller is cast from aluminium and the frame is fabricated from steel in our Auckland Factory and then galvanised for protection from the weather.

Our **Standard Roller** is suitable for cable up to 80mm diameter, it has a reinforced wall at each end, nylon self-lube bearing. The base includes a retractable handle and mounting holes.

Our **Dog Bone Roller** is designed to be suitable for large cables and pipes up to a 300mm diameter. Supplied with mount in holes and hinged bases which allows you to join and to pin the single rollers to form a size and shape arch for going around bends. It can also be joined on the ends of our 3 curve or 4 Corner Rollers. Available options are Dog Bone Roller Bushed – which comes with nylon self-lube bearing or Dog Bone Ball Bearing – which has low friction sealed ball bearings.

**Standard Roller**

**Dog Bone Roller**

CODE	DESCRIPTION	DIMENSIONS L x W x H	WEIGHT	SWL
