

DRUM TRAILER

Also available in Hire, our Drum Trailers are proudly designed and built by the team at Powerhowse Electric. The frame is fabricated from steel in our Auckland Factory and then galvanised for protection from the weather.

Ideal for Site use, the single axle Drum Trailer has a lifting capacity of 1 ton and can accept multiple drums (e.g. mains and pilot) or a single drum dimension of 2200mm diameter and 1500mm width. The drum would need to be locked into place by spacer locks that we also supply. It can load and unload drums via mounted winch with synthetic rope located by the tow bar.

Note: the total overall weight of the multiple drums cannot exceed the 1-ton weight capacity. Tow ball is universal. **Braking Unit not included – must be requested.**

Drum Trailer

Trailer Braked, Spare Wheel, Self-loading, Support legs, Jockey Wheel, Universal tow.

Drum trailer with drum raised ready for transportation.
